

# TAVARES SEAPLANE BASE & MARINA

---

**AIRPORT IDENTIFIER: FA1**

**UNICOM FREQUENCY: 122.975**

**GPS COORDINATES: 28° .48.043 N – 81° .43.655 W**

**Parking:** On the water, check in with the Air-Boss on UNICOM frequency for directions to parking: Apron or Beach. Apron parking is limited, first-come, first served after exhibitor display aircraft. There is the possibility that the new boat ramp and grassy overflow lot at the west end of the park/seaplane base will be available for additional parking. Pilots should be prepared to dock or beach and tie up appropriately.

**Ramp/Apron:** The pilings from the old marina have been removed (improved apron access and parking)! Any seaplane with a gross weight greater than 3,000lbs or landing gear extending more than 36 inches, please approach with caution. Risk varies with water levels. High lake level = lower risk. Water level currently appears higher than average (as of 1/1/2020) – a good thing.

**Fuel:** Tavares Seaplane Base & Marina has 100LL and 90 octane ethanol free recreational fuel available for purchase. Fuel is only available on the apron, however accommodations may be made to fuel straight float aircraft on the shore. Fueling operations on apron will be limited to specific morning and afternoon time periods. Price will be set by the market.

**Prop Shop at Woodlea:** Please fly in and visit The Prop Shop! They sell snacks, gifts and apparel, including “America’s Seaplane City” gear and Tavares Seaplane Base novelties!

**QUESTIONS?** Contact the Aviation Manager:
